

Encrypted Email is critical for compliancy and security requirements within your organization. When enabled, it allows our customers a server based approach to protect sensitive data when sending and receiving messages.

BIGGEST BENEFIT

Encrypted Email protects you from problem communications and users with minimal administration or commitment on your end.

FEATURES

1

Increase employee productivity

Encrypted Email provides your business with another level of security that protects an element that is difficult to manage – employees. By eliminating another opportunity to interrupt day-to-day operations, your team can get back to being productive and keep email disruption to a minimum.

2

Eliminate unnecessary add-ons

By partnering with Cloud Technology Advisors to enable encrypted email, we can eliminate the need for additional spam services to protect your infrastructure. While additional layers are always helpful, the management can become overwhelming. Encrypted Email simplifies the management without losing the necessary security.

3

Protect your organization

Enabling Encrypted Email ensures inbound and outbound content stays inside our network. That means communications are restricted to password authentication when necessary and web browser viewing only. Compliancy has never been so simple.

CLOUD AT YOUR FINGERTIPS. MIGRATE TODAY!

Headed down the Encrypted Email path? Here are some complementary services you should consider:
MICROSOFT EXCHANGE • ZIMBRA • ENCRYPTION AT REST • BUSINESS CONTINUITY • ARCHIVING
