

Mobile Device Management gives you the ability to safely deploy mobile devices by securing devices and protecting access to enterprise data from company issued or BYOD devices.

BIGGEST BENEFIT

Having the ability to secure your network from outside users as well as the ability to secure your data available outside of your network.

FEATURES

1

Lost devices & GPS location tracking

People are human. Mistakes happen. In the event that a device with your data residing on it is lost, we can automatically locate and activate or deactivate device features and access to apps and corporate data based on GPS location of enrolled mobile devices relative to geofence boundaries.

2

Content containerization

Remotely push files to mobile devices for reliable and secure document sharing. Cloud Technology Advisors provides you with the ability to take control of confidential corporate content and eliminate the risks of information landing in the wrong hands.

3

Mobile apps management

How do IT operations secure enterprise apps, enforce compliance for public app usage and again, protect corporate content? By joining forces with Cloud Technology Advisors. Together app management just got a little easier.
